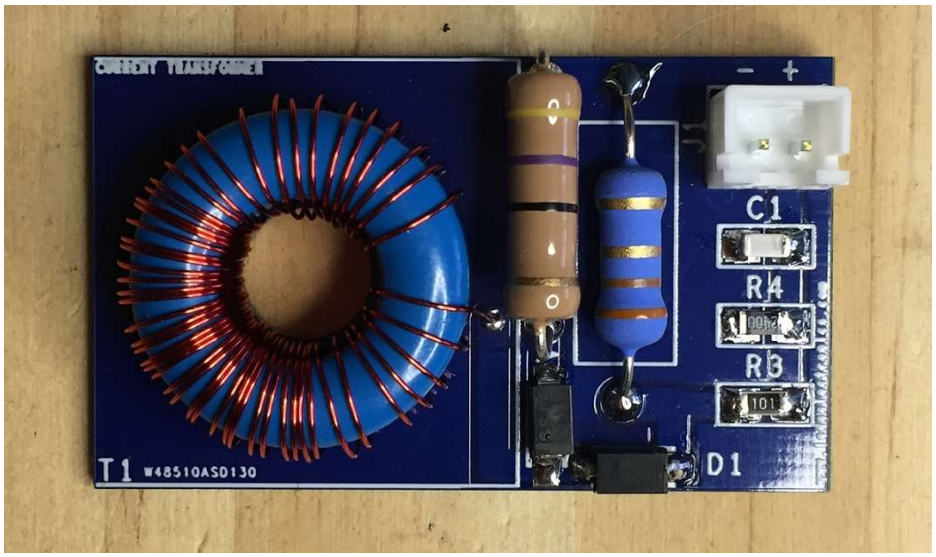
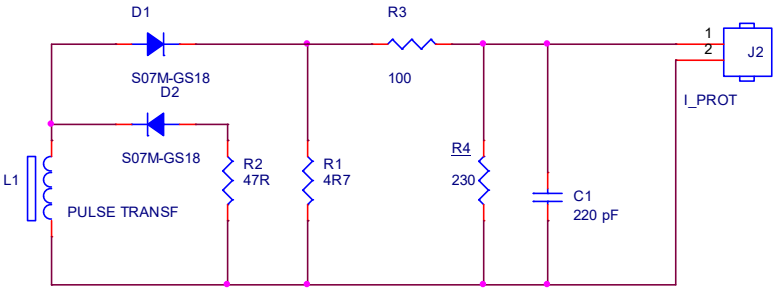
HIGH FREQUENCY CURRENT TRANSFORMER

Le-CT-25



- **0..10A Model Le-CT10 with Resistor R = 47 Ohms**
- **0..25A Model Le-CT25 with Resistor R = 4.7 Ohms**
- **Transformation ratio: 1:50**
- **Operation up to 400 kHz**
- **Integrated resistor on board, to avoid overvoltages**
- **Insulation voltage: 2000V**
- **Maximum secondary current: 1A**
- **Inductance of the secondary: 5 mH**
- **Direct compatibility with SG3524 and UA384x chips**



Intended for the measurement of high frequency current in power converters of all kinds. The conductor whose current is to be measured must be introduced through the toroidal core.
